X6R/V3R-TP- A/D D/A Converter with SANE and Ethernet Operating Manual Rev. 2.5

Page intentionally left blank

# Important Safety Instructions

- Please read this manual carefully.
- Please keep this operating manual in a safe place.
- Heed all warnings.
- Follow all instructions.
- This device may only be used in accordance to the information provided in this operating manual. Ensure that all recommendations detailed in this operating manual, especially the safety recommendations, are followed before and during use of the device.
- Do not use this device near water and liquids, for example, in humid or damp rooms.
- Clean only with a dry cloth.
- Do not block or cover any ventilation openings. Install the device in accordance with the operating manual.
- Do not install or place the device near a source of heat. Such as: radiators, power-amplifiers, or any other heat emitting devices.
- Protect the power cord from being stepped on, crushed, pinched or damaged in any other way or form. Pay special attention to the condition of the AC mains sockets on the device.
- Do not place this device on an unstable table, tripod, cart, etc. The device may fall, causing serious damage to the device.
- The device can be disconnected from the power supply by unplugging the power cord. The power cords must be freely accessible at all times. The device should be disconnected during lightning storms or when the device is unused for a long period of time.
- The device must be grounded. Disconnecting the ground is strictly prohibited.
- The internal components of the switched-mode power supplies operate at very high voltages. Coming into contact with the power supplies can lead to considerable electric shock, which may result in death.
- Only use attachments and accessories that are specified by the manufacturer of the device.
- This device contains no user serviceable parts. Please consult with authorised service personnel before attempting to carry out any repair or modification of the device.
- Your warranty will be voided if you tamper with the internal components of the device.

### Purchaser Information

#### Operating Manual

Please read this manual. If you call for technical support, we will assume that you have already done so. Study the operating manual carefully in order to familiarise yourself with the device and its operation. The operating manual contains important information on proper use of the device.

It cannot be guaranteed that this operating manual will not contain typographical mistakes or misprints. The operating manual is regularly revised and updated.

Modifications, which serve the purpose of technical improvement of the device, may be carried out without prior notification.

#### Transport and Shipping

Always ensure careful handling of the device. The device should be transported and shipped in shock-absorbing transport cases. If these are not available, we recommend well-padded packaging such as the coated carton in which the device was delivered.

We strongly advise against the use of light weight flight-cases without shock-absorbing rack-in-rack mounting.

#### Environments

This device can be used in E1, E2, E3, E4, or E5 environments (as listed below) according to the harmonised European standards EN55103-1 and EN55103-2 "Electromagnetic compatibility – Product family standard for audio, video and audio-visual and entertainment lighting control apparatus for professional use"

E1-Residental

E2-Commercial and light industrial

E3-Urban outdoors

E4-Controlled EMC environment e.g. broadcast and TV-studio

E5-Heavy industry

The product is intended for the use in moderate climate.

#### Ventilation

Do not block or cover any ventilation openings. Install the device in accordance with the operating manual. Allow for sufficient space around the units (at least 200 mm  $\equiv$  7,87" free space behind the rear-panel of the device) and make sure to allow for air circulation near the ventilation openings on both sides of the device. Keep the rear of the rack open during operation. Do not operate the device close to heat emitting equipment, such as power-amplifiers. Leave sufficient space (minimum ½ RU) between the device and any heat emitting devices housed in the same rack.

An X6R/V3R device may be placed on top or beneath other Optocore products, except DD32E, without additional space.

#### Please note:

Do not populate more than 4 adjacent rack spaces with Optocore devices.

Maintain 1RU of empty space between each 4 RU of Optocore devices.

Keep the equipment rack open during operation.

Ensure air circulation around the devices.

Maintain at least 200mm (~8") clearance behind the rear panel of the devices.

Water and Moisture etc.

To prevent fire or shock hazard, do not expose the device to direct sunlight, dust, water, or rain during operation or storage.

#### Cleaning

Only use a dry linen cloth to clean the device. If the unit is very dirty, moisten a cloth using a little water and a small amount of household detergent. Never use cleansing agents containing solvents to clean the device.

#### • Operating and Storage Temperature

Operating temperature:  $-20^{\circ}C \dots 50^{\circ}C \equiv -4^{\circ}F \dots 122^{\circ}F$ ; ensure proper ventilation

Storage temperature:  $-20^{\circ}C \dots 60^{\circ}C \equiv -4^{\circ}F \dots 140^{\circ}F$ 

#### Power Supply

The device can be disconnected from the power supply by unplugging the power cord. The power cords must be freely accessible at all times. The device should be disconnected during lightning storms or when the device is unused for a long period of time

#### Important:

The switched-mode power supplies operate at very high voltages.

Coming into contact with the power supplies can lead to considerable electric shock, which may result in death.

Never disconnect the main plug by pulling the cable, always pull the plug itself.

Power-supply cords should be routed in such a way that they are not likely to be walked on, crushed, pinched, or damaged in any other way. Pay special attention to the plugs and the sockets of the device.

#### Important:

A damaged power cable must be replaced immediately.

The device must be grounded. Disconnecting the ground is strictly prohibited. Ensure that the device is always grounded using the power connector.

Do not cover the ground connection of the power connector with any kind of insulation material!

#### • Fuse

There is no fuse in the device. The power supplies contain circuitry that protects the device from overload.

#### Lightning

For additional protection of this device during lightning storms, or when it is left unattended and unused for a long period of time, disconnect the power cord. This will prevent damage to the device due to lightning and power line surges. Disconnection from the mains power supply is only possible by disconnecting the power plug from the mains socket.

#### • External objects and/or liquids

Never push objects of any kind into the device through openings in the casing. They may come into contact with dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the device.

#### Cables and Accessories

Only use attachments that are specified by the manufacturer of the device.

Use high quality, properly terminated, cables to connect the device. The device should only be used with optical fibre cables that are specified for use with the devices optical transceivers and within the specified power budget of the optical transceivers. When not in use, ensure that the optical connectors on the device and the optical fibre cables are covered with the provided caps.

Do not place this device on an unstable table, tripod, cart, etc. The device may fall, which can cause injury and serious damage to the device. Any mounting of the device should follow the manufacturer's instructions, and should use mounting accessories recommended by the manufacturer of the device.

#### Servicing

Do not attempt to service this device yourself.

The device contains no user serviceable parts, components or controls. The operation of an opened device is not permitted. Such operation can lead to damage of the device's components due to lack of air flow through the device.

The device may not be serviced, altered or modified without authorisation from Optocore or an Optocore authorised distributor / dealer. Only qualified service personnel may carry out repair and maintenance work on the device. The warranty of the device will be voided if any unauthorized maintenance or repair work has been carried out.

### CE/FCC-Conformity

This document confirms that the X6R/V3R-TP bearing the CE (Communauté Européenne) label meets all requirements in the EMC directive 2004/108/EG laid down by the Member States Council for adjustment of legal requirements. Furthermore the product complies with the rules and regulations of the low-voltage directive 2006/95/EG and the Restriction of Hazardous Substances Recast Directive 2011/65/EU (RoHS 2). This product bearing the CE label complies with the following standards, ratified by CENELEC (Comité Européen de Normalisation Electrotechnique):

Electromagnetic compatibility – Product family standard for audio, video, audio-visual and entertainment lighting control apparatus for professional use EN 55103-1, Emission EN 55103-2, Immunity EN 60065, Safety requirements

#### FCC notice

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communication. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at his own expense.

Changes or modifications not expressly approved by Optocore GmbH could void the user's authority to operate this equipment.

#### Industry Canada Compliance Statement

This Class[A] digital device complies with Canadian ICES-003.

#### Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la class[A] est conforme à la norme NMB-003 du Canada

The authorised declaration and compatibility certification lies with the manufacturer and can be viewed on request. Responsible as manufacturer is:

#### OPTOCORE GmbH, Alte Allee 28, 81245 Munich, Germany

#### represented by Marc Brunke, Managing Director

**N.B.** The awarding of the CE label confirms the compliance with legal directives issued for the manufacturer and marketing of electronic and electrical devices. As such the CE label is not a "seal of quality" but rather proof that the device bearing the CE label conforms with the electromagnetic compatibility standards laid down in the above named testing regulations.

Munich, 11.12.2013

# **Device Description**

Congratulations on your purchase of an X6R/V3R-TP A/D and D/A Converter Device with SANE and Ethernet. The X6R/V3R-TP series manual will quickly demonstrate the advantages of the device and help to ease your day-to-day workload in a professional audio-visual environment.

9 in 1 - the X6R/V3R-TP is a network converter unit for SANE with the highest degree of flexibility with regards to the I/O configuration. Four different card types enable the complete customisation of the I/O cards. It enables the conversion of analogue signals - 16 inputs, 16 outputs, 8 inputs and 8 outputs, dual microphone inputs with dual independent adjustable gains. The X6R/V3R-TP is designed for sample rates up to 192 kHz. Six different versions of **X6R** and tree **V3R** are available:

X6R-TP-16MI	$\Rightarrow$ 16 microphone inputs - two 8-channel mic/line input boards
V3R-TP-8MI	$\Rightarrow$ 8 microphone inputs - single 8-channel mic/line input board
X6R-TP-16LI	$\Rightarrow$ 16 line inputs - two 8-channel line input boards
V3R-TP-8LI	$\Rightarrow$ 8 line inputs - single 8-channel line input board
X6R-TP-16LO	$\Rightarrow$ 16 line outputs - two 8-channel line output boards
V3R-TP-8LO	$\Rightarrow$ 8 line outputs - single 8-channel line output board
X6R-TP-8MI/8LO	⇒ 8 microphone inputs and 8 line outputs - single 8-channel mic/line input board and single 8-channel line output board
X6R-TP-8LI/8LO	<ul> <li>⇒ 8 line inputs and 8 line outputs - single 8-channel line input board and single</li> <li>8-channel line output board</li> </ul>
X6R-TP-8DualMic	→ 8 microphone inputs with two independent preamps each- single 8-channel dual-mic/line input board

#### What do the product names refer to?

V3 refers to the channel capacity of the device. Where V is the Roman 5: 5+3=8.X6 refers to the channel capacity of the device. Where X is the Roman 10: 10+6=16.R refers to the Optocore Revolution series hardware platform.

**TP** specifies that the device is equipped with SANE twisted pair connectivity.

The X6R/V3R-TP units can be used together to create SANE CAT5 Network (64 audio channels + Ethernet). Audio channels and Ethernet can be exchanged between SANE and the OPTOCORE<sup>®</sup> OPTICAL DIGITAL NETWORK SYSTEM – X6R/V3R-TP device can be connected to any FX R-series Optocore unit. All parameters on the converters can be controlled and monitored with the same software application as all other Optocore devices: OPTOCORE CONTROL software. Every channel from TP device connected by SANE is available throughout the complete OPTOCORE fiber network.

The X6R/V3R-TP is especially designed for rack mounted applications and permanent installation. All cards are equipped with Euroblock / Phoenix connectors. These common installation interfaces provide a simple and cost-efficient connection with other audio equipment.

The X6R-TP with the dual microphone input card removes the problem where only one of the FOH or Monitor engineers can have full gain control of a single microphone input channel. Every microphone input incorporates two independent microphone preamps meaning both can be adjusted individually. Therefore, analogue split boxes with two stage racks to give FOH and monitor engineers the freedom to adjust their mic preamps directly at their own console can be a thing of the past.

The X6R/V3R-TP with analogue mic input, line input and line output cards allow customised I/O configuration per device. Two/one card slots can be equipped with different cards, so six combinations with 16 inputs, 16 outputs or 8 inputs and 8 outputs can be assembled for the X6R according to the customer's requirements.

The microphone inputs include a high quality microphone preamp, phantom power and selectable gains in 1 dB steps from -4 dB to +66 dB at a maximum input level of 22 dBu. The line inputs are equipped with selectable maximum channel levels of 27 dBu, 22 dBu, 18 dBu, 8 dBu and the line output with a selectable maximum channel level of 22 dBu, 18 dBu, 12 dBu, 8 dBu. The high quality preamps, A/D- and D/A converters make the X6R units ideal for the incorporation into audio systems even if no OPTOCORE network is present. They provide a wide dynamic range with negligible distortion and extremely low noise.

When using the X6R/V3R-TP as a SANE Network device the two AES/EBU ports can be configured as inputs or outputs in groups of four and the AES/EBU channels can be exchanged between SANE and the I/O cards.

Word Clock input and output connections enable the synchronisation of the units to an external source and are used to pass the word clock from one unit to the next. For stand-alone applications, the devices are equipped with an internal word clock generator.

Up to 8 TP devices can be used in one SANE CAT5 daisy chain to extend OPTOCORE FX fiber node with up to 64 audio inputs and 64 audio outputs and additional 100Mbit LAN ports. Microphone preamps on the TP device can be controlled from any node in the fiber network as well as from the console running Emulation Mode.

X6R/V3R-TP units can be set to work as high quality standalone analog to AES/EBU converter – in this case SANE connectivity is deactivated.

Up to four X6R/V3R-TP, which are set as standalone converters, can be connected to the four principle D-Sub ports of one DD32R(E) enabling the exchange of 32 AES/EBU signals (64 channels) and control data. The ports include two control data channels. The X6R/V3R-TP units can be operated and controlled via the OPTOCORE network with OPTOCORE CONTROL software without the need for any external data cable. For control in standalone applications LAN, USB or RS232 ports on the front / rear panels can be used as well.

All Optocore devices are designed and built using the latest programmable microprocessors and FPGA (field programmable gate array) logic circuitry. This allows the devices internal logic to be updated, in the field, ensuring a continual state-of-the-art device.

Optocore devices, and complete networks, are configured and operated using the OPTOCORE CONTROL software. The software provides access to all configuration parameters and controls needed to operate the system, including: naming channels, setting gains and phantom power, routing as well as recall and capture of partial or full system configurations. The software can be operated offline as well as online with level meters for all channels on the network.

The LEDs on the front panel of the X6R/V3R-TP units allow an instant overview regarding the status of each channel, indicating if audio is present on a channel, if a peak level is reached and the activation of the phantom power per channel.

# **Card Types**

Four types<sup>1</sup> of cards with Euroblock / Phoenix connectors can be incorporated into the card slots

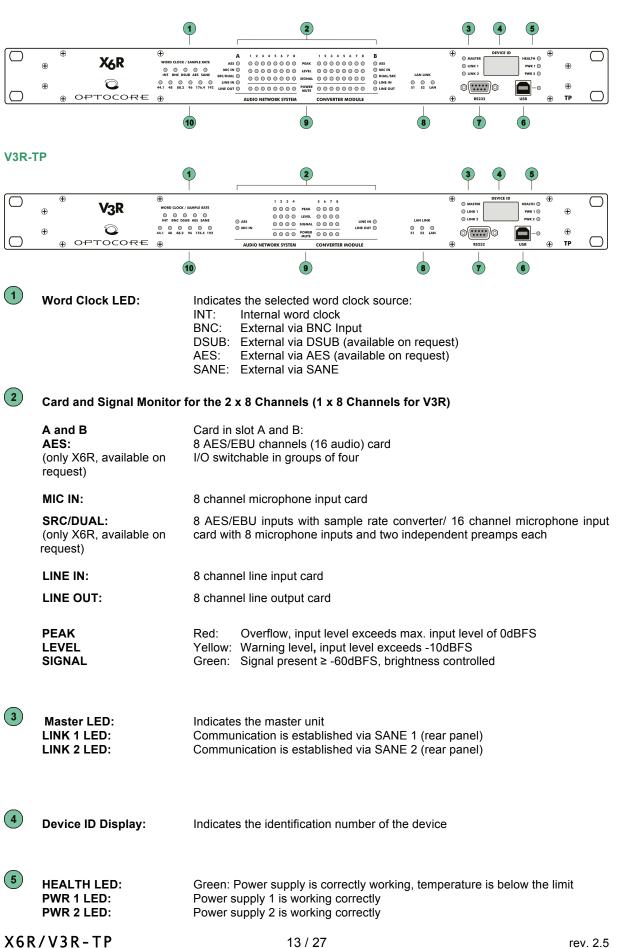

- 8 microphone inputs
- 8 line inputs
- 8 line outputs
- 8 microphone inputs with two independent preamps each

The X6R/V3R-TP is shipped preconfigured with I/O cards according to the order placed with Optocore.

<sup>&</sup>lt;sup>1</sup> The additional AES/EBU and AES-SRC cards for X6R-TP are available upon request. Please contact inquiry@optocore.com for details.

# **Rear Panel**

1	AES Port A and B:	2 x 8 AES data channels, plus two control data channels
2	Word Clock IN:	BNC Word clock input allowing synchronization of SANE devices/network from an external word clock source (available on request)
	Word Clock OUT:	BNC Word clock output for synchronization of external devices
3	POWER 2:	Mains input for power supply 2 (100 240 V)
4	POWER 1:	Mains input for power supply 1 (100 240 V)
5	Labels:	I/O card type in the slot(s) and serial number
6	GROUP:	Cards with Euroblock / Phoenix connectors (8 channels) in slot GROUP A and GROUP B at a X6R-TP or in slot GROUP A only at a V3R-TP
7	SANE 1: SANE 2:	SANE RJ-45 interface for data transmission + 100 Mbit Ethernet SANE RJ-45 interface for data transmission + 100 Mbit Ethernet
8	LAN:	100 Mbit RJ-45 Ethernet interface

# **Device Details**

#### **SANE Ports**

All TP units are equipped with two RJ45 200MBit SANE Ports for 64 bi-directional channels of synchronous audio + 100MBit Ethernet.

#### A/D and D/A Converter

24-bit converters supporting sample rates of 44.1, 48, 88.2, 96, 176.4, 192 kHz ensure the high-quality conversion of analogue audio signals.

#### Analog Inputs

The microphone inputs include preamps with selectable gain between -4 dB to 66 dB in analogue 1 dB steps. Phantom Power (+48V) can be activated individually on each input. The maximum input level is +22 dBu. It is possible to use microphone inputs for line level sources.

The line inputs gain controls can be individually adjusted in four steps of maximum input level: 27 dBu, 22 dBu, 18 dBu and 8 dBu.

#### Analog Outputs

The outputs gain controls can be individually adjusted in four steps of maximum output level: 22 dBu, 18 dBu, 12 dBu and 8 dBu.

#### **AES Ports**

According to the AES/EBU standard, each physical channel contains two audio channels, i.e. with the eight digital channels on one AES Port, 16 audio channels are available.

All X6R/V3R-TP units are equipped with two AES 8-channel Ports labelled A and B. The ports are software adjustable for different tasks and can function as a digital split if required. Both ports can operate in parallel. In converter mode the X6R/V3R-TP will automatically take its AES/EBU signals from the port with valid incoming data with Port A having the highest priority and transmit the Preamp Control. Port B can be used to re-transmit the incoming signals if required. Port B configuration depends on the hardware setup of the analogue I/O boards in the device.

#### Word Clock

Devices with Optocore/SANE modules are equipped with an internal, high quality, low jitter clock generator as well as Word Clock inputs and outputs. Any device on the network can act as the master of the network and pass Word Clock to networked Optocore/SANE devices.

The internal/networked Word Clock is available at the Word Clock output connector of each device on the network to synchronize non-networked devices.

In standalone network configurations external synchronization is not required.

The Word Clock input termination can be switched on using the OPTOCORE CONTROL software's Local Settings. External termination is not required to avoid cable reflections.

Word Clock master negotiation after any Word Clock source failure is done automatically.

#### **Power Supply**

The device is optionally equipped with two power inputs and power supply units. If one power supply fails, due to malfunction of the feeding power line or the power supply unit itself, the device will automatically switch over to the other power supply unit. In order to make the power supply redundant, both power inputs must be connected to the mains supply, if possible to different phases, power supply systems, or even better, one of them to an uninterrupted power supply (UPS).

The power supply units operate with mains voltage of 100 ... 240 V and frequency of 50 ... 60 Hz. Thus the device can be used throughout the world without any modifications or transformers.

#### Important:

The switched-mode power supplies operate at very high voltages.

Coming into contact with the power supplies can lead to considerable electric shock, which may result in death.

To prevent electric shock, do not remove any covers of the device.

### Control

All system and device parameters are set using OPTOCORE CONTROL software on a PC. If the X6R/V3R-TP units are connected to a FX Device using SANE or DD32R(E) using the BI-B as shown in Connection Tables the control and audio data is transmitted over SANE resp. the D-Sub-25 interfaces. OPTOCORE CONTROL can control all X6R/V3R units in a network. In stand-alone applications, the RS232, LAN or USB port enables the configuration and monitoring of one unit attached directly to the PC.

Please note:

Please refer to the Optocore Quick Start Guide for the basic system configuration and setup.

For more detailed setup please refer to the Optocore Software Manual

#### X6R-TP with DD32R(E)

X6R-TP devices can work in converter mode and can be fully controlled through the Optocore network when connected to DD32R-FX or DD32E device. The control of the microphone preamps, levels etc. is enabled by choosing an X6R with the appropriate card configuration in the local settings dialog of the DD32R(E) under Port setup. Up to four X6R and eight V3R units can be connected to one DD32E using BI-B, Tri-A or Tri-B cables. The I/O configuration of each DD32R(E) port depends on the card configuration of the attached X6R device:

Cards	Device	I/O	
2 x MIC IN	X6R-16MicIn	16 In	
2 x LINE IN	X6R-16LineIn	16 In	
2 x LINE OUT	X6R-16LineOut	16 Out	
1 x MIC IN and 1 x LINE IN	X6R-8MicIn/8LineIn	16 In	
1 x MIC IN and 1 x LINEOUT	X6R-8MicIn/8LineOut	8/8 Reverse	
1 x LINE IN and 1 x LINEOUT	X6R-8LineIn/8LineOut	8/8 Reverse	
1 x DUAL MIC	X6R-8DualMic	16 In	

If 8/8 reverse is chosen, physical channels 1-4 (audio channels 1-8) of the D-Sub-25 ports on the DD32R(E) are outputs, physical channels 5-8 (audio channels 9-16) are inputs. The X6R AES ports are configured as eight inputs first followed by eight outputs. Therefore by using the straight-through BI-B cable and choosing 8/8 Reverse the inputs and outputs of the DD32R(E) and X6R are connected correctly.

#### X6R/V3R-TP in SANE Network Applications

X6R/V3R-TP devices can be connected in a SANE daisy chain and integrated with the Optocore network through any R-series FX device. All device parameters like gain, phantom and pad can be accessed and modified using OPTOCORE CONTROL software, which runs on PC connected via USB or RS232 to any FX device or via LAN to any LAN or SANE port.

#### Third Party Control

Third party protocols for device controlling can be used. It is possible to control Optocore preamps directly from Yamaha, Studer/Soundcraft, SSL, Lawo and Digico consoles with Special Emulation Mode configured. A Multiple Emulation Mode feature enables to control preamps in Optocore network from four different consoles.

# SANE bandwidth allocation

The standard bandwidth allocation of a SANE link is as follows:

Audio	64 Channels @ 48 KHz
Ethernet	100 MBit Fast Ethernet

### **Connectors and Cables**

#### SANE Ports

Use standard, fully wired, twisted pair cable (Cat 5, Cat 5e, Cat 6) terminated with RJ-45 connectors. SANE utilizes all four pairs of the Cat 5 cable, two pairs for standard Ethernet transmission and two pairs for the SANE synchronous audio transport. A SANE cable shall not exceed a total cable distance of 100 m

#### AES Ports

According to the RS422/RS485 hardware standard used for the transport of AES/EBU standards, each channel requires a twisted pair. A common braided shield should enclose the pairs.

Standard computer data cables are sufficient for good quality AES data transmissions over the short distances typically necessary in most applications.

#### **RS232-Connection**

Use a standard shielded RS232 cable.

#### **Connector Hood Quality**

Locking screws for D-Sub connectors should be compatible with 4-40 UNC. Care should be taken in selecting the right type of connector hoods in order to fulfil the requirements of EMI-radiation directives. Full metal connector hoods should be used, approved acc. to VDE 0871, FCC 20780 and EMC directive 2004/108/EG, providing attenuation > 40 dB between 30 MHz up to 1 GHz. The shield of the cable should have contact to the connector hood.

#### **USB-Connection**

Use a USB-A to USB-B cable between the PC and the Optocore device.

#### LAN-Connection

Use a standard twisted pair cable (Cat-5, Cat-6) with RJ-45 connectors.

#### Word Clock-Connection

Use 75  $\Omega$ -coaxial-cable with BNC-connectors.

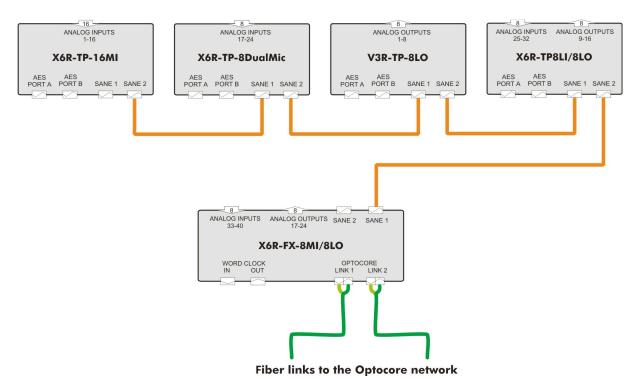

#### Mains-Connection

Standard power cords with IEC C13 connectors.

### Hardware Connection

#### Example 1

The X6R/V3R-TP can be used as a SANE to Optocore converter. The X6R/V3R-FX with analog I/O cards is connected with three X6R-TPs with different types of cards and one V3R-TP by CAT5 cables. The word clock is transmitted by SANE and Optocore, so there is no need to use additional 75  $\Omega$  cables. The following figure demonstrates the configuration of a 32 inputs and 16 returns SANE system, which can be combined with a bigger Optocore ring. In this example there are three Optocore X6R-TP units: one with two mic input cards, second one works as a dual mic device, third X6R-TP with one input and one output analogue card. There is also one V3R-TP with one output card. All those devices are creating a CAT5 SANE network. The X6R-FX device is used as a bridge between SANE and Optocore network.

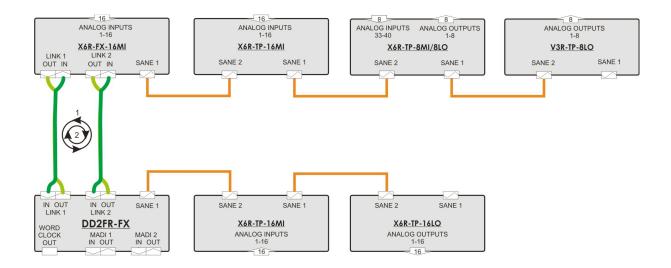

#### Fig. 1: Connection of three X6R-TP units, one V3R-TP and one X6R-FX.

Each of the devices in this example is an analogue converter with SANE network interface. It is possible to use AES ports, which are built in each TP device to input or output additional digital audio channels to/from the network. The configuration of the AES ports as inputs and/or outputs and the routing is carried out with OPTOCORE CONTROL. It is possible to route input channels from other devices in an Optocore ring to the –TP outputs.

The same single CAT5 connection transports audio data, word clock and 100 Mbit Ethernet.

#### Example 2

X6R/V3R-TP devices are used mostly as a channel extension to main fibre optic Optocore network nodes. In this example two FX devices are connected with dual ring redundant network. X6R/V3R-TP devices are used as an analogue extension. On the one end three TP devices extend the channel count of X6R-FX unit. This group of devices can be used as a stage box with 40 microphone inputs and 16 line outputs. Furthermore distance between each device can be 100m, so each device can be located in a different place of the stage. On the other end of the fiber loop DD2FR-FX, with two MADI ports, is extended by two TP devices. MADI ports can be connected to 3<sup>rd</sup> party consoles. With OPTOCORE CONTROL software Emulation Mode can be set therefore consoles may control gains for all OPTOCORE mic preamps directly without additional control unit.

#### Fig. 2: Connection of four X6R-TP units, one V3R-TP, one X6R-FX and one DD2FR-FX.

Optocore network shown above is also capable to transport 100Mbit Ethernet without any additional equipment as well as control data e.g. RS485/RS422. Each X6R/V3R-TP device is equipped with two AES/EBU ports which can be used as a additional digital I/O. All setup, routing, configuration should be performed with OPTOCORE CONTROL software.

OPTOCORE network in this configuration example requires no additional cabling for WORD CLOCK. Sync signals are transported simultaneously with OPTOCORE/SANE signal.

#### **BI-B Cable**

In order to connect a principal port of a DD32R(E) to an AES port of an X6R converter device, a BI-B cable with D-Sub-25 connectors should be used.

DD32R(E) Principal Port X1...X8: 8 AES/EBU channels X9, X10: Control channels D-Sub-25-male Fastening system: 4-40 UNC X6R/V3R AES Port A X1...X8: 8 AES/EBU channels X9, X10: Control channels D-Sub-25-male Fastening system: 4-40 UNC

### Warranty and Liability

#### Summary of Warranty

OPTOCORE X6R/V3R-TP device is warranted against defects in material and workmanship for 60 months (5 years) from the date of purchase. This warranty does not include mechanical damages caused by misuse. This warranty covers the original registered purchaser only and is not transferable. This warranty does not apply to devices which have been purchased in used condition or demonstrator equipment.

OPTOCORE will, at its discretion, repair or replace a defective product, providing that the defect has occurred under normal operating conditions.

This warranty does not cover damage from acts of God, accident, abuse, neglect, contamination, unauthorised modification, misuse, or operation outside of the environmental specifications for the product, improper site preparation or maintenance, or abnormal conditions of handling. This would include over-voltage failures, and conditions outside of the products specified ratings, problems with customer-supplied software or interfacing, or normal wear and tear of mechanical components. OPTOCORE will acknowledge the evaluation of warranty after inspection.

Not covered by this warranty are defects arising from electromagnetic or electrical interferences, deficiency, excess, or surge of electrical supply, air conditioning, or humidity. This also includes repairs made necessary by dirt, abrasion, moisture, rust, corrosion, or similar conditions.

Devices on which the Serial Number has been removed or defaced are not eligible for warranty service.

OPTOCORE devices contain no user-serviceable components: refer to qualified service personnel for repair or upgrade. The warranty will be void if you tamper with internal components. Please address any questions or inquiries to OPTOCORE or your distributor/dealer.

For a full warranty conditions refer to the Warranty Card attached to every Optocore device with a first shipment.

#### How to Obtain Warranty Service

When discovering a problem with an OPTOCORE device, you should contact either Optocore directly or a dealer/distributor to determine and confirm a hardware fault. If it is a software issue the hardware must not be returned to OPTOCORE, OPTOCORE will issue a support ticket in this case.

If hardware service is required within the warranty period, take the equipment, along with warranty card, to the nearest authorised OPTOCORE dealer/distributor. The dealer/distributor will make sure that the device is serviced according to the terms of warranty by OPTOCORE or an authorised service centre.

If the equipment needs to be returned directly to OPTOCORE, first contact support@optocore.com.

OPTOCORE requires the serial number of the equipment intended for return, as well as a short description of the problem. If possible, you should also provide us a phone number where you can be reached during regular working hours. To return a defective product, please contact your distributor / dealer. Our web site: http://www.optocore.com/ provides a complete list of Optocore distributors / dealers.

Make sure the equipment being returned is packed carefully to protect it from damage during shipment. OPTOCORE requires that shipments are pre-paid and insured – unless specifically authorized in advance.

We strongly advise not to use simple flight-cases without rack-in-rack mounting.

#### **Declaration of Liability**

Optocore accepts no liability for damage caused to other devices through operation of the X6R/V3R-TP device.

Optocore is not liable for any damage caused by shipping accidents, misuse, abuse, operation with incorrect AC voltage, operation with faulty peripheral equipment, or improper or careless installation of the device.

Neither OPTOCORE nor anyone involved in the production of the equipment shall be liable for any indirect, special, disciplinary, consequential, or incidental damages arising out of the use or inability to use this equipment even if OPTOCORE has been advised of the possibility of such damages. In no event shall the liability of OPTOCORE exceed the purchase price of any defective equipment.

Optocore accepts no claims for compensation whatsoever (e.g. cancellation of events).

# Shipping Contents

The standard shipment of a X6R/V3R-TP unit contains the following:

- 1 X6R/V3R-TP unit
- 1 CAT5 patch cable
- 2 power cables (according to the number of PSU units installed)

Any additionally purchased equipment such as optical wave-guide cables in required lengths, D-Sub cables and adapters, RS232 cables, and international electric cables, which have been supplied on your request and your purchase order, cannot be listed above.

Please note that due to the Ecology reason standard shipment **does not** contain printed copy of User Manual. All latest OPTOCORE user manuals can be downloaded from the website:

#### http://www.optocore.com/index.php/support/downloads

Printed version of User Manual is available on a special demand. Please contact <u>support@optocore.com</u> if printed version is required.
